

Estate Management

All natural & biodegradable

Probio products for Estate Management are composed of an all-natural probiotic consortium of powerful microbes and their metabolites.

Probio products are produced through natural fermentation using Advanced Probiotic Technology and the principles of beneficial microorganism applied science.

Use Probio Products for:	Benefits of Probio products for Estate Management:
<ul style="list-style-type: none"> • Cleaning • Odour Control • Fat Traps, Septic Tanks and Waste Water Treatment • Drain Maintenance • Dam Maintenance • Food Waste Composting • Landscaping, Gardening and Composting 	<ul style="list-style-type: none"> • Control odours and flies associated with food waste • Treat ALL food waste including raw and cooked food and plate scrapings • Fast acting and persistent odour neutralisation • Effective degreaser • Replace the need for many hard chemicals • Breaks down grease and fat • Maintain free-flowing and odour-free plumbing • Hassle free composting

How Probiotics Work

All environments including living organisms have a microbial ecology that can be managed and improved by the constant delivery of probiotics. Probiotics are live microorganisms that, when applied in sufficient amounts, deliver a health benefit to living organisms and their environment.

Probiotics work in the opposite manner of anti-bacterial and chemical products. While anti-bacterial and chemical products attempt to kill bad bacteria, probiotics use beneficial microorganisms to replenish good bacteria and in so doing control the bad bacteria through the principle of competitive exclusion. Various metabolites such as lactic acid from the production process found in **probio products** are powerfully anti-bacterial, anti-fungal and anti-viral, but they do not kill the beneficial microbes.

Probio products creates a clean, healthy environment by populating the area with beneficial microorganisms so they dominate toxic, disease-causing bacteria. When applied consistently and following the proper usage guidelines, this powerful cleaning concentrate will help you maintain a clean healthy working environment.

Probio products are not chemically synthesized or genetically engineered or modified. It is non-toxic, non-corrosive and safe to use around humans, animals and plants.

For examples of successful case studies from around the globe, please contact info@probio.co.za

Probio – Advanced Probiotic Technology

Probio is a product developer and producer of non-toxic, fully biodegradable and sustainable probiotic based chemical alternatives. Probio is a South African leader in probiotic solutions for human health, home & garden, agriculture, livestock health, industrial and aquaculture applications. Established in 2010, Probio manufactures a complete line of probiotic products at their Stellenbosch facility. Products are sold nationally through qualified licensees, distributors and retailers.
